SUPER SOLDIER BIOHACKS

MARK MCILYAR AND CAPT. AUSTIN SULLIVAN

Training plays a huge role in DARPA's Super Soldier experiments. So your training with the Warrior Strong System is going to take you one step closer to super soldier status.

However, there are other "bio-hacks" these military and government officials are using to get their soldiers into almost "science fiction" like shape. Some of their methods are not natural or use special technology that would cost millions of dollars to get your hands on. So I have a small section in this resource if you're interested in the sci-fi stuff.

But what may really excite you are the NATURAL methods DARPA is using to give their soldiers an edge. We're going to go into details about the specific supplements and hacks that you can implement today to accelerate your journey to super soldier body status.

DARPAS SCIENCE FICTION LIKE SUPER SOLDIER BIOHACKS

DARPA stands for Defense Advanced Research Projects Agency.

It was founded in 1958 by Dwight D. Eisenhower and is responsible for the developing and marching out innovative (sci-fi like) technologies for military use.

And as “out there” as it sounds, it seems that DARPA really is at work creating a wave of “super soldiers.” In fact, they’re called “Metabolically Dominant Soldiers” which is what inspired me to write the “Metabolic Dominance Field Guide” for your nutrition guidelines during the Warrior Strong System.

Think about Steve Rogers — A.K.A. Captain America. He isn’t a rich vigilante who’s in pretty good shape and has a lot of cool gear, like Batman. Captain America takes it a step further. He is basically American Soldier 2.0. His smarts, speed, strength and stamina can’t be matched by regular human beings. And this kind of super soldier isn’t reserved for comic books. DARPA has been working on it for a long time.

If you’re not too interested in the “sci fi” stuff that DARPA has been up to, you can skip to the next section where I’ll show you a completely natural way to give yourself the same kind of edge that military researchers are trying to manufacture with their super soldiers — so you can go from being a civilian to as close to a super soldier as possible.

But if you want to hang around learn more about what DARPA has been up to, check out some of the plans they’ve concocted to create super soldiers:

1. SYNTHETIC BLOOD

Synthetic blood would be much more efficient than natural cells. Right now, the most promising technology being tested by DARPA is respirocyte, a theoretical red blood cell made from diamonds. In theory, this respirocyte contains gasses at pressures of nearly 15,000 psi and exchange carbon dioxide and oxygen the same way real blood cells do.

Super soldiers with respirocytes mixed with their natural blood would have trillions of miniature air tanks inside their body. This means they would never run out of breath, making them incredibly dominant on the battlefield. Plus, it would also mean they could spend hours underwater without other equipment.

2. MITOCHONDRIA OVERHAUL

There's a relatively new project that's been called "Energizer Bunny in Fatigues." The whole premise here is they would create a drug that allows the mitochondria to burn fats instead of carbohydrates. A **Dan Farber Cancer Institute** pathologist, Lan Bo Chen, likewise found that blending a green tea extract with B vitamins could triple the endurance of lab rats by multiplying their mitochondria production. But before you get too excited, the same drink only managed to increase the performance of cyclists by a measly 3%. That said, the drink is still being tested by the army.

3. KANGAROO BOOTS

Scientists at **MIT** and other technological universities are looking for ways to augment the human ankle and Achilles tendon with bionic boots that mimic kangaroo tendons. Humans wearing these boots would be able to leap seven feet in distance or more, sprint at inhuman speeds, and run all day without getting tired.

4. PAIN VACCINES

DARPA's Persistence in Combat initiative is working to help soldiers recover almost immediately from wounds. They're doing so with pain immunizations. Pain immunizations would work for 30 days and eliminate inflammation that causes lasting pain and agony after an injury. In theory, soldiers could feel the initial burst of anguish after being struck by a bullet, but the pain would fade in seconds. This way, the wounded soldier could treat him or herself and keep fighting until medically evacuated.

5. EXERCISE PILL

The technical name for the "Exercise Pill" called, GW501516. Basically, it mimics the effects of endurance exercise on the gene 'PPAR-delta' which is meant to replace the need for endurance exercise in order to have great endurance. When GW501516 binds to the PPAR-delta gene, it boosts and enhances a fat burning signal.

In one mouse study, two mice were fed a high fat and sugar diet (cookie dough, basically) and left to themselves with a wheel in their cage. Mouse A – code name Couch Potato – wasn't given GW501516 and was observed to be overweight, lethargic, and "greasy". Mouse B was given the exercise pill and was not only lean and toned but also full of energy. Tim Wilson – who discovered the drug while looking for a treatment for diabetes – initially believed that this was a "wonderdrug" for metabolic syndrome. But after further studies, they concluded it's highly toxic and unsafe for humans.

Now of course, it just takes a little bit of digging to find the facts I laid out for you above. And there's NO WAY that DARPA has released any of the real crazy sci-fi experiments to the public. They're doing top secret experiments to keep our country safe that would likely make our jaws drop. With that said, it is neat to have a sneak peak into the sci-fi stuff.

However, what should be most exciting to us "civilians" is that there are some natural ways that DARPA is experimenting with to try and create super soldiers. And you and I can actually use them daily. Check out the next section to find out how you can take one step closer to becoming a super soldier.

NATURAL SUPER SOLDIER SUPPLEMENTS

The whole idea behind a super soldier is they are superior to mere men. They're more lean and fit, stronger, smarter, have more energy and almost unstoppable endurance.

But did you know there's a natural way to improve everything above and more? One of the best ways to accelerate fat loss, build strength, improve brain function and increase energy and endurance is to increase your testosterone levels. Now, DARPA is likely using something synthetic like anabolic steroids to do that. And as the saying goes, "to each their own."

But here at Live Anabolic, we give our men the ability to boost testosterone the safe and 100% natural way because it's healthier and promotes longevity, whereas anabolic steroids or Testosterone Replacement Therapy do not.^{1 2}

Basically, the science and the military world both agree that testosterone is important for overall performance as a man. In order for civilians and soldiers alike to perform at their best, even when they're away from the field or retired, is to have healthy testosterone levels.

The reason it's so important is because testosterone is the hormone that makes us men. And for the most part, the higher the better. Having optimal testosterone increases lean body mass and strength, accelerates fat loss, improves joint health and energy, it even keeps you looking and feeling younger. Plus, it improves brain function and sexual function so you perform better everywhere.

That's why at Live Anabolic, we've created a stack of 100% natural testosterone boosters that'll safely increase testosterone levels at any age, so you can get the benefits of having higher testosterone – and get as close to a super soldier as possible.

Give this stack of supplements a shot and they'll be a good comrade on your way to achieving a super soldier body.

ANABOLIC RELOAD

Here at Live Anabolic, we've sold out of bottles of Anabolic Reload several times because men like you are flat-out seeing results. Our team created Anabolic Reload because, as men age, our testosterone levels decrease. But this supplement is a way to "reload" your testosterone levels so you can start looking and feeling younger, lose belly fat, get stronger and get in Marine-like shape.

There are 6 scientifically-proven ingredients inside Anabolic Reload:

1. FUROSAP

There's an anabolic super-herb called Fenugreek. That helps boost free testosterone levels. Free testosterone is the most bioavailable form of testosterone in the body – and while some companies brag about boosting "total" testosterone, it's this free testosterone that really counts. However, we didn't want to give you plain old fenugreek...

Which is why we found a local company here in the United States with an innovative technology that extracts the #1 active anabolic ingredient inside fenugreek called protodioscin to increase its absorption. This way, you can experience fenugreek's test-boosting benefits almost immediately and enjoy more energy, vigor and better fat loss.

The innovators call this new potent formula— Furosap. It's like Fenugreek "on steroids" but completely safe, natural, and backed by incredible research. A study published in the International Journal of Medical Sciences...

Took 50 male volunteers who were given Furosap for 12 weeks. The men were aged 35 to 65 years old. And the results showed the men who consumed Furosap increased free testosterone by a whopping 46% in 90% of men in the study – meaning 45 of the 50 men taking Furosap got a nice boost in free testosterone. Doctors also noted these men gained more mental alertness and improved their mood and sex-drive.

Another recent study published in *Functional Foods In Health and Disease*, measured the effects of Furosap in a double-blind, placebo-controlled clinical study of 40 men over 12 weeks.

They found, “Furosap significantly increases lean body mass and fat free mass,” Which basically means they maintained muscle and lost body fat. They also had elevated serum testosterone levels and improved blood flow, both of which accelerate fat loss as well.

So if you want to up your game in the gym, maintain muscle and build a rock-solid midsection, while boosting energy and feeling great, this ingredient will be a game-changer.

2. WITHANIA SOMNIFERA

New research shows this ancient herb, used in Eastern Medicine to promote youthful vigor, enhance muscle strength and endurance and boost testosterone levels 17%.

And get this...

Our team here at Live Anabolic has found a way to get your hands on the highest concentrated and most bioavailable form of withania somnifera that took 14 years to develop and is now the fastest absorbed withania somnifera on the planet.

This anabolic herb was tested and published in the ***American Journal of Men's Health*** with some amazing results. In a 16-week double-blind, placebo-controlled, cross-over study – which is the gold standard of reliable research – scientists tested the effects of withania somnifera on fatigue, vigor, and hormones in overweight men aged 40-70 with mild fatigue.

Half the group was given a placebo. The other half was given withania somnifera. After 16 weeks, the group taking withania somnifera boosted their testosterone almost 20%. The participants reported more energy, increased sex-drive and overall improvements in mood and well-being with zero negative side effects.

3. FORSKOLIN ROOT EXTRACT

Next is another anabolic herb called Forskolin, which is the ultimate free-testosterone boosting herb.

This all-natural tropical herb has been tested in the trenches for thousands of years and is shown to boost free testosterone levels in overweight and obese men by 34%.

So you don't have to be in good shape, yet you'll still enjoy a boost in your male youth hormones.

Here's how the experiment went down:

30 overweight and obese men were given a forskolin supplement or a placebo for 12 weeks. And may I remind you there were NO changes to their diet. Nor did they exercise.

After the 12 weeks, the out of shape men who consumed the forskolin supplement had a significant decline in body fat percentage. Lean muscle mass increased. As did free testosterone. There were no negative side effects either.

4. VITAMIN D

According to the ***Journal of Clinical Endocrinology and Metabolism***, 75% of American men are deficient in Vitamin D (an important vitamin for testosterone). So it's no surprise as to why low testosterone is at a record high.

Vitamin D is shown in the studies to boost free testosterone. And men who don't get enough vitamin D are more likely to be overweight or obese. So if you're struggling with belly fat that won't go away no matter what you try, or you pile on weight easily, chances are you want to get more of this key nutrient that you're likely deficient in.

5. BORON

Boron is a powerful mineral that boosts your free testosterone, increases your lean muscle and even supports joint health – all of which are great benefits for guys our age.

One large 2015 study discovered that taking 6mg of Boron can increase the amount of total testosterone in your body. Plus, it increases free testosterone by a whopping 25%. Another 2011 study published in the ***Journal of Trace Elements in Medicine and Biology*** shows that Boron also reduces estrogen levels in men.

Estrogen is an increasing problem for men. There are estrogenic chemicals in nearly every necessary hygiene product you have in your house – like your deodorant, toothpaste, body wash, shampoo and even some toilet paper. However, Boron sets up an “estrogen defense shield” in the body that prevents estrogen from waging war on your testosterone levels.

To top it off, boron also boosts vitamin D levels in the body and improves nutrient metabolism.

6. BIOPERINE® BLACK PEPPER FRUIT EXTRACT

Bioperine® Black Pepper Fruit Extract is a special delivery mechanism that you combine with the anabolic herbs, vitamins and minerals in Anabolic Reload to turbocharge their effectiveness and give you a big boost in your testosterone.

This way you can feel the surge of energy rushing throughout your entire body fast, finally melt belly fat, pack on lean muscle and get stronger in your workouts. You'll also skyrocket your sex-drive and enjoy piston-like stamina to go all night long.

And it only gets better from there because these benefits compound over time, meaning the longer you take it, the better results you'll experience.

The real magic of these ingredients happens when they get into your bloodstream fast, which is why myself and team have bent over backwards to find a

way to add this quick delivery absorption system to Anabolic Reload. Bioperine also acts as a shield around each ingredient to increase the delivery and absorption of these herbs, vitamins and minerals for maximum effect.

This combination of ingredients will quickly, effectively and naturally increase testosterone levels no matter what your age or fitness level right now, and accelerate fat loss and muscle building.

ANABOLIC RELOAD P.M.

Anabolic Reload P.M. is another favorite of thousands of men out there because of how it's improving their sleep and life.

The best way to increase the amount of testosterone your body produces while you sleep is by taking a handful of ingredients scientifically proven to boost testosterone and help you sleep deeper and longer each night. That's exactly what Anabolic P.M. does. In fact, Anabolic P.M. boosts testosterone and accelerates fat loss even on nights when you can't get a 6, 7, 8 hours of sleep and can only get 4 or 5. Here are the ingredients that make it so effective:

1. VITACHERRY®

VitaCherry® is manufactured right here in the U.S and it provides a maximum strength dose of anthocyanins.

Anthocyanins are a compound found in blackcurrants, red pears, and especially, tart cherries. You may have heard that eating tart cherries before bed can help you fall asleep faster, recover your muscles overnight, and get you into a deeper state of sleep. That's actually 100% true thanks to anthocyanins.

VitaCherry is 15x more potent in Anthocyanins than the leading tart cherry powder on the market. It's safe, clinically supported and will help you wake up feeling more rested and recovered to crush your workouts the next day.

Plus, because the anthocyanins inside VitaCherry® help reduce inflammation, you'll feel more of the "good" from working out and less of the "bad" – like joint aches and soreness that lasts for days at a time.

The anthocyanins inside VitaCherry® can help you wake up with the intense kind of rock hard erections you remember as a teenager, too – which doctors all agree is actually a very healthy sign.

Now the catch is the company that makes this special formula doesn't sell it directly to the public. Instead, only a select group of supplement manufacturers are able to get access to VitaCherry® and we're one of them at Live Anabolic.

2. TRIBULUS TERRESTRIS

We also added 750 mg of tribulus terrestris with 95% total saponins inside Anabolic Reload P.M.

I'll explain the 95% total saponins in just a sec because saponins are vitally important to get the t-boosting effects of tribulus terrestris. Tribulus terrestris is a small leafy plant that's been shown to increase testosterone levels and DHT (which is arguably a more potent natural androgen than testosterone).

Plus, researchers call tribulus terrestris "an effective aphrodisiac that supports sex-drive and sexual performance in men."

And while this is an exciting natural herb that can benefit your manhood in several different ways, we didn't add just any old Tribulus Terrestris that you would find on Amazon or on the shelves of your local supplement shop. See, research shows it's the saponins inside tribulus terrestris that are what's believed to be responsible for all of its major benefits.

Most supplement companies with tribulus terrestris only contain 45% saponins or less to save a couple of bucks, we refused to settle for anything less than the most potent form of tribulus terrestris... with 95% saponins, inside of Anabolic Reload P.M. so you can really feel the difference in your energy, performance, and manhood faster than you expected.

3. MACA

Maca is a world-famous aphrodesiac that's been shown to boost sex-drive regardless of how much testosterone one has (high or low)... and works even if someone deals with anxiety or depression.

Basically, this Peruvian root, in it's clinically-effective dose, bypasses most obstacles, and gives men of all ages a noticeable libido boost. But the sexual superpowers of maca are not the only reason we added it to Anabolic Reload P.M. Maca has also been shown to increase workout performance so you can get the most out of training programs like the Warrior Strong System. Maca also improves blood flow, which you (and her) will notice almost immediately when you wake up or before bed.

Plus, maca naturally boosts your mood and puts you in a better frame of mind, so you can wake up motivated, energized, and ready to tackle the day and get more done.

4. ZMA COMPLEX

Next up is a potent deep sleep ZMA complex which is 10.5 mg of Vitamin B6, 450 mg of magnesium and 30 mg of zinc.

Research from the **University of North Carolina, Texas A&M University**, and the **University of Texas**, show men deficient in vitamin B6, magnesium, and zinc, produce less testosterone and growth hormone which are key for building muscle mass, staying lean and recovering from tough workout sessions.

One 8-week study in 27 football players showed taking a ZMA supplement daily significantly increased muscle strength, functional power, testosterone and IGF-1 levels.

Plus, individually, both zinc and magnesium have been shown to reduce muscle fatigue and either raise testosterone levels or prevent a fall in testosterone due to exercise. Maybe even more exciting, zinc and magnesium have been shown in tandem, to increase relaxation, improve sleep quality and help folks fall asleep faster so you can get deep, quality, anabolic sleep, that can help boost testosterone levels and growth hormone and increase muscle recovery and muscle building overnight.

Studies also show when you take vitamin B6, zinc and magnesium before bed, it may help with weight loss. In a 1-month study in 60 obese people, those taking 30 mg of zinc daily lost significantly more body weight than those taking a placebo. Plus, magnesium and vitamin B6 have been shown to reduce bloating and water retention which can also help take some inches off the gut as well.

5. BIOPERINE®

Having a delivery system to get these ingredients into your bloodstream FAST instead of getting burnt up in your stomach acid like most other supplements is important. Which is why myself and the team at Live Anabolic have bent over backwards to find a way to add a unique delivery absorption system to Anabolic Reload P.M. called Bioperine®.

Just 5 mg of this all-natural patented black pepper extract acts as a shield around each ingredient inside Anabolic Reload P.M. to increase the delivery and absorption of these herbs, flavonoids, vitamins and minerals for maximum effect.

Plus, Bioperine® awakens their active ingredients and makes them more bio-available in your body for an even greater effect so you get the most out of each test-enhancing, recovery-accelerating, erection-boosting ingredient faster than you'd likely expect.

It's this combination of ingredients, along with Bioperine®, that gets the job done effectively. The potent anabolic herbs, super-flavonoids, vitamins and minerals inside Anabolic Reload P.M. go to work overnight to give you a deep and restful sleep that boosts testosterone and has you waking up leaner night after night.

ANABOLIC
[RELOAD] P.M.

Click here to claim your bottles of Anabolic Reload P.M. for the “Warrior Strong” Discount Price.

ANABOLIC SHRED

To help you specifically lose body fat and reveal a ripped midsection faster along with the Warrior Strong program is by using our natural, caffeine-free fat-burning supplement, Anabolic Shred.

The ingredients inside Anabolic Shred have been proven in studies to help shred fat around the gut, lose inches on the love handles, and chisel up in other areas of your body. We created Anabolic Shred to help men get leaner even if they don't exercise – so imagine how powerful of an effect it'll have when you pair it with the Warrior Strong System and the Metabolic Dominance Field Manual. In fact, Anabolic Shred will help ensure that the carbs you eat during the carb-cycling protocol (and especially on your “reward meals”) will ensure those carbs go to work towards making you leaner instead of storing on the body.

Here are the ingredients in Anabolic Shred that make it so powerful:

1. R-ALPHA LIPOIC ACID

R-Alpha Lipoic Acid is actually an antioxidant that's already made in the body. But as you get older, your body produces less R-Alpha Lipoic Acid. Because of that, it's more difficult for your body to use the glucose you get from carbs as energy.

Think about when you were a kid. You had so much vitality and energy, and could eat all the food you wanted without gaining weight or feeling sluggish after. Your body was completely energized after cake, ice cream, and cookies to the point you were bouncing off the walls.

That's because back then your body produced more alpha lipoic acid and was better able to shuttle the glucose from carbs into your cells to be used as energy. But as you've gotten older, your body produces LESS alpha lipoic acid, so glucose is not being transported to your cells as quickly or efficiently as it could be.

As a result, your body produces insulin to help move it along, which can actually cause fat storage, especially around the waist. It also causes low energy

levels, lack of motivation or focus, and intense cravings, which is why carbs have made you feel slow and tired.

Now while R-alpha lipoic acid will help your body utilize glucose for energy more efficiently, what you may love most is how this powerful antioxidant actually helps burn fat.

2. CHROMIUM POLYNICOTINATE + NIACIN

Now you've likely heard of chromium before. It's a trace mineral that helps shuttle glucose into muscle cells. A trace mineral basically means it's something that's needed in very small amounts.

Chromium is also known as a "Glucose Tolerance Factor" because it improves your body's tolerance of glucose. Here's an example of how that works with eating carbs:

When you take chromium alongside consuming carbs the chromium allows your body to utilize those carbohydrates by shuttling them right into the muscle where they can be used for energy and ultimately help you push harder in the gym and possibly even hit some personal bests.

As we get older, our bodies become less tolerant of glucose. So without something like chromium, it's possible that for some folks... the glucose may just sit there floating in the bloodstream... and then be transported by insulin to the liver and other cells to be stored as fat. But simply taking chromium can help utilize carbohydrates more efficiently, delivering glucose straight into the muscle and allowing your body to use that glucose later when it's actually needed like when you're pushing the weights or doing cardio or whatever fun activities or hobbies you can think of.

Now, as good as chromium polynicotinate is by itself – it works even better when paired with Niacin, which is why we added it into our Anabolic Shred formula.

The combination of these two, amplify the effects of chromium polynicotinate so your body can utilize carbs better and get more results out of your workouts or just have more energy for your favorite hobbies or other fun activities, pre-

vent unwanted fat storage in your cells, burn more body fat and FASTER than you expected, and simply be in better shape, fit well in your clothes, and feel all around like a better version of yourself in every way.

3. FORSLEAN®

Coleus Forskohlii is an Ayurvedic herb that some doctors call the “granddaddy” of them all when it comes to increasing cAMP levels – a powerful fat burning mechanism that exists in the body.

In fact, researchers from **Michigan State University** and the **University of California Berkeley** call Coleus Forskohlii a powerful “cAMP Booster” Because it’s one of the only ingredients in the world that’s shown to naturally increase cAMP levels.

And because of Coleus Forskohlii’s positive effects on cAMP levels, you experience a waterfall of benefits that sound like the next steroid or something, but are totally safe, legal and natural. But after doing some research, I found Coleus Forskohlii has very limited bioavailability on it’s own – which like I said before, basically means it doesn’t get absorbed into the bloodstream as fast or efficiently to experience really noticeable results.

So I investigated an ultra-potent form of Coleus Forskohlii that is more easily absorbed in the body called ForsLean®. I was surprised to find ForsLean® has won numerous awards for it’s innovation in providing a fast-acting and powerful form of Coleus Forskohlii that’s literally second to none.

In one randomized, double-blind, placebo-controlled study performed at the **University of Kansas**, 15 overweight and obese men were given 250 mg of ForsLean® twice a day for 12 weeks, while the other group of 15 men were unknowingly given a placebo. The researchers reported the men who consumed ForsLean® twice a day had “favorable changes in body composition by significantly decreasing body fat percentage and fat mass”.

Additionally, the ForsLean® administered group saw a change in bone mass compared to the placebo group with a “trend toward a significant increase for lean body mass”. The study also confirmed serum free testosterone levels were significantly increased in the ForsLean® group compared with the placebo group.

Now it's important to note these men did not change their diet, they didn't start an exercise regimen. These were everyday guys who were overweight or obese and simply added ForsLean® to their daily routine twice a day and decreased body fat mass, increased lean muscle, and boosted testosterone. And research shows these effects come from the herb's ability to increase cAMP levels.

4. LONGJACK

Longjack is an ancient herb that's known as an "ergogenic aid," which basically means it enhances energy utilization by boosting energy production, improving energy control and maximizing energy efficiency.

The reason it works so well as a natural energy booster is because longjack increases cellular energy by improving cAMP signals. Plus, thanks to cAMP, studies also show longjack increases testosterone.

One study published in the ***Journal of the International Society of Sports Nutrition*** tested the effects of longjack in a group of 63 subjects. Half the group was given longjack and the other half was given a placebo. Researchers found the longjack group lowered cortisol levels by 16%... and boosted testosterone levels by 37%. The reason it works so well is because longjack specifically increases the most bioavailable form of testosterone in the body, "free testosterone."

One study from the ***University of Malaya*** tested the effects of longjack on a group of trained men for 8-weeks. What they found was the longjack group had a greater loss of body fat percentage than the placebo group, gained more muscle strength than the placebo group, and the longjack group added almost 2 inches to their arms compared to the placebo group that didn't gain any muscle.

5. BIOPERINE®

We've gone into detail on this one a few times already.

This ingredient increases delivery and absorption of the herbs, vitamins and minerals for the maximum effect. Bioperine awakens the active ingredients in Anabolic Shred and makes them even more potent and bioavailable in the body, which is key to losing belly fat, getting stronger and boosting endurance over the course of the Warrior Strong program.

The reason we've added it into all three of these supplements is because of how helpful it truly is to make sure these ingredients work in your favor quickly and for the long haul.

This combination of ingredients will help you get the fastest results from the Warrior Strong System.

**Claim your supply of Anabolic Shred for the
“Warrior Strong” Discount by clicking here.**

HOW TO TAKE THE SUPER SOLDIER STACK

So there you have it, man – the Super Soldier Stack.

One more time, the three supplements are:

Anabolic Reload
Anabolic Reload P.M.
Anabolic Shred

For the best results take:

One serving of Anabolic Reload in the morning
One serving of Anabolic Reload P.M. at night
One serving of Anabolic Shred before each carb-heavy meal

You'll be blown away by the results when you follow the Warrior Strong program, Metabolic Dominance Field Manual and combine one or all of the supplements of this stack into the mix.

SUPER SOLDIER BIOHACKS CONCLUSION

Thanks for checking out this Super Soldier Biohacks resource.

There's a lot of pretty neat stuff that our military is researching and developing behind the scenes. Some of it may be controversial but all of it is interesting.

Now, unfortunately we can't look and perform like Steve Rogers (Captain America) overnight. But we can be inspired by the comic books, the neat sci-fi stuff and the men and women who are fighting for our country. Plus, when you follow the Warrior Strong System you're well on your way to achieving a Captain America-like body that looks better, feels better and performs at higher levels.

Before you go, my #1 takeaway is to try one, two or all three of the Live Anabolic supplements that I've linked to inside this ebook. We're getting floods of raving testimonials from guys who are using them to naturally increase testosterone levels, lose belly fat, have more energy and drive, and so much more. These supplements will pair perfectly with the Warrior Strong System to help you achieve the super soldier body you're after safely and naturally.

Every supplement is backed by a 365-day 100% money back guarantee so there's no risk at all.

I can't wait to hear about your results!
